How to connect to the VPN

macOS

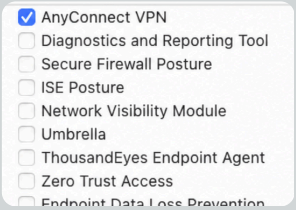
Last updated: 09/2026

You will need:

- Internet connection
- Administrator rights
- Leuphana email adress and password

1 Installation

1. Open vpnclients.leuphana.de in your browser.
2. Select the file corresponding to your device and download it.
3. Open the downloaded file and follow the installation steps.
4. When selecting the installation type, choose only the top package, AnyConnect VPN.



2 System extensions

Allow the *Cisco AnyConnect* system extensions. To do this, go to *Settings* → *General* → *Login Items*
Without this, the VPN connection will not work!

3 Connecting to the VPN

1. Open Cisco Secure Client.
2. If the drop-down list of available VPN connections is empty after the installation, please manually enter one of the following:
   - *vpn.leuphana.de/intranet-mfa*
     for Intranet (access to campus network)
   - *vpn.leuphana.de/online-recherche-mfa*
     for Online-Recherche (globally licensed library resources)
3. Click *Connect*.
4. A Microsoft window will open in your browser. Log in as usual with your *Leuphana email address*, *password*, and MFA method.
