

Neurons in the network

Learning in Governance Networks in the Context of Environmental Management

Jens Newig
Leuphana University Lüneburg

Dirk Günther
Umweltbundesamt, Berlin

Claudia Pahl-Wostl
University of Osnabrück

Network governance as a means to improve environmental management

Transaction cost perspective: Networks between hierarchies (more flexible) and markets (more stable and reliable) allow actors to react flexibly to complex, uncertain and changing environmental conditions

Learning perspective: Integration of different sources of knowledge and competence, information sharing and social learning

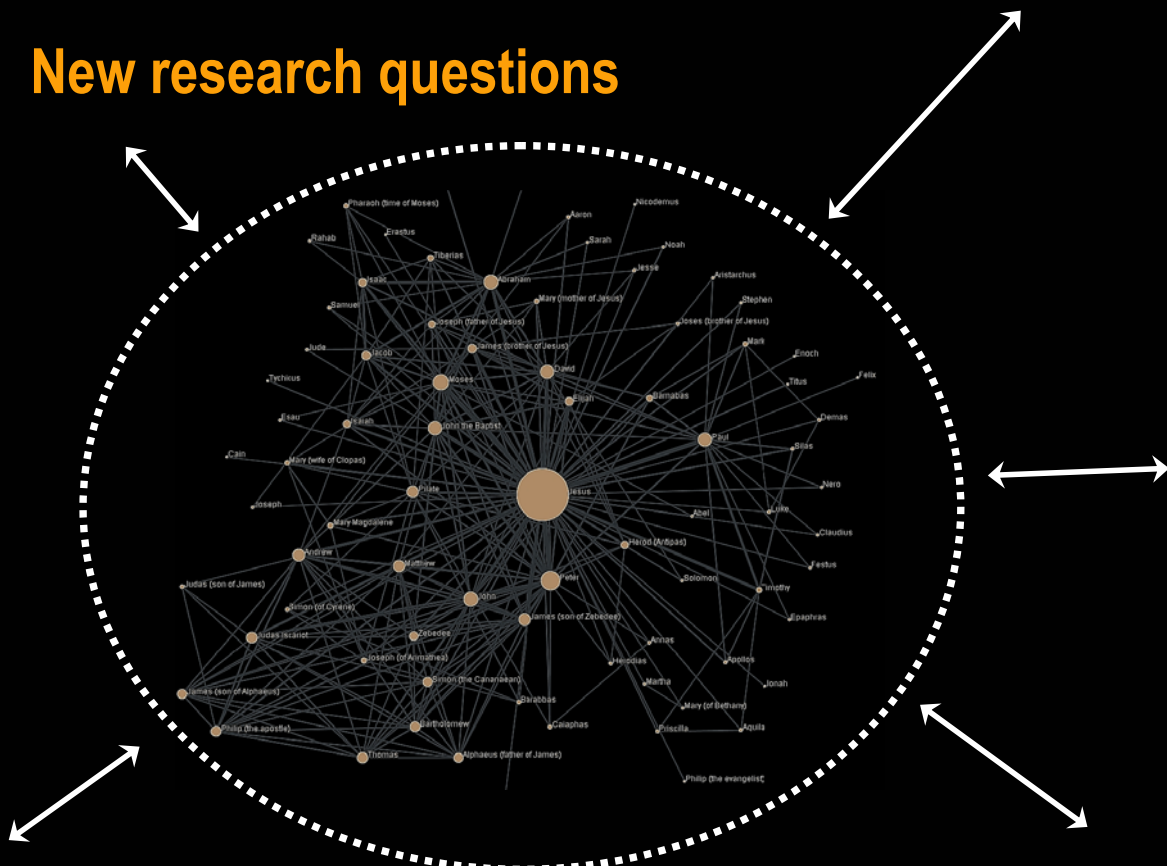

Complexity perspective: Networks as “dissipative structures” between markets and hierarchies “at the edge of chaos” are expected to produce emergent and creative solutions

Previous research on social networks

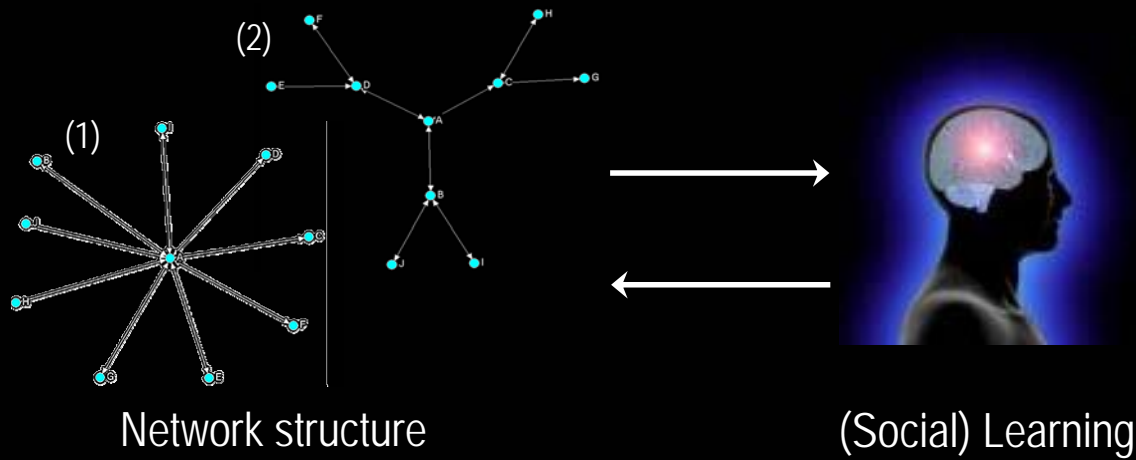

Newig, Günther & Pahl-Wostl | Learning in Governance Networks

New research questions

Newig, Günther & Pahl-Wostl | Learning in Governance Networks

How does network structure impact on learning

...and vice versa?

Newig, Günther & Pahl-Wostl | Learning in Governance Networks

Definition of learning

Definition: Cognitive (and behavioural) change (Miller 1996, Argyris 2003)

Hypothesis re. learning in networks: Networks provide an access to novel information and influence the way information is being processed

Newig, Günther & Pahl-Wostl | Learning in Governance Networks

Learning-related network functions

- Information transmission (Valente 2005)
- Deliberation (Habermas 1981, Webler/Renn 1995)
- Resilience (Berkes & Folke 1998)

Newig, Günther & Pahl-Wostl | Learning in Governance Networks

Individual and collective learning

Individual learning:
Change of neurons in a brain

Collective learning:
Change of network relations

Newig, Günther & Pahl-Wostl | Learning in Governance Networks

Single and double loop learning

	Single-loop learning	Double-loop learning
Individual learning	Learning of new facts Correction of practices	Change of assumptions and values
Collective learning	Punctual change in network structure Policy output: change of rules of operational choice	Fundamental change of network structure; Building of network resilience Policy output: change of rules of collective-choice

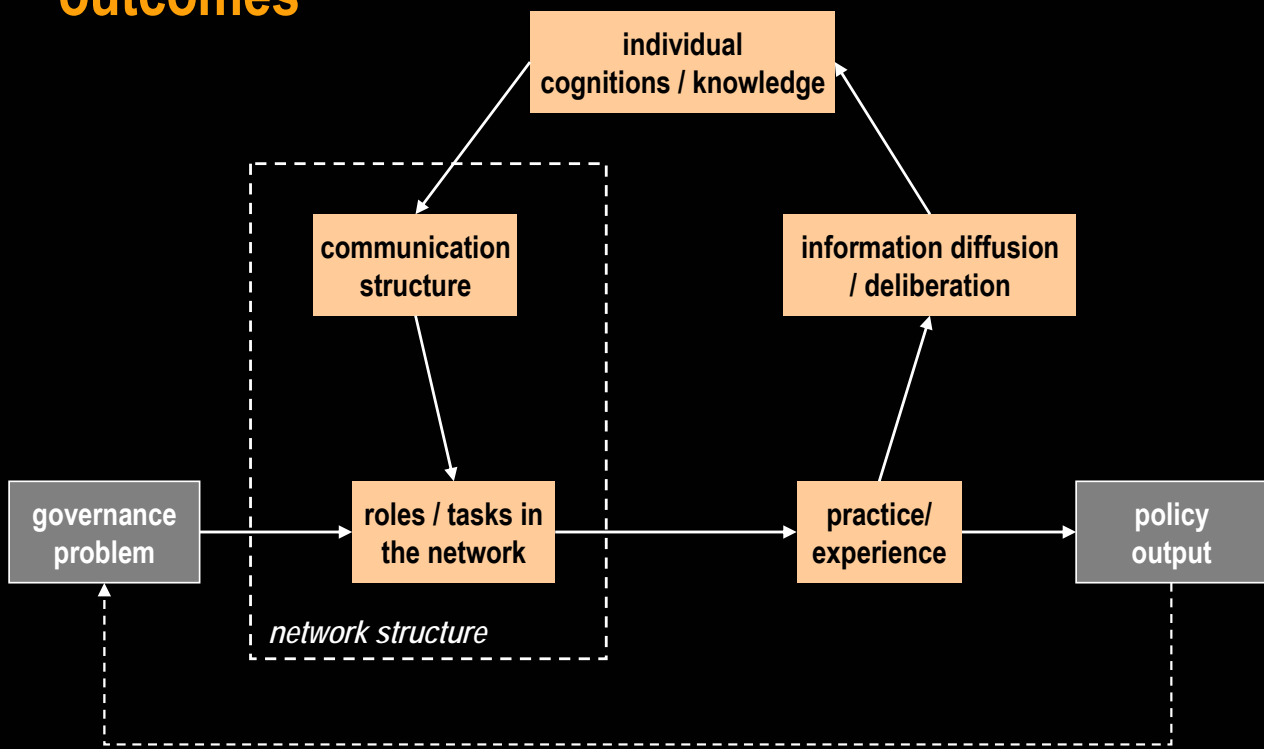

Newig, Günther & Pahl-Wostl | Learning in Governance Networks

Network characteristics and the performance of network functions

Network function Ntw. characteristic	Information transmission	Deliberation	Resilience	Single-loop learning	Double-loop learning
Network Size	+	+ / - (convex curve)	+	+	+ / - (convex curve)
Homophily	+	+	+	+	○
Multiplexity	+	+	+	+	-
Density	++	+	+	+	-
Cohesion / absence of structural holes	+	++	+	+	-
Relation of weak to strong ties	+	-	○	○	+
Centralisation	+	-	-	+	+
