

Apply Now! - edu_ITA Seminar "Inter- and Transdisciplinarity Education in Action: Methods, Processes, and Examples"

Description:

The edu_ITA Seminar "Inter- and Transdisciplinary Education in Action: Methods, Processes, and Examples" is a collaborative initiative between the Lehrservice and the Methodology Center of Leuphana University and part of an overall effort to expand our mutual understanding of the theory and practice of Interdisciplinary (Id) and Transdisciplinary (Td) teaching and learning. The seminar is intended to help university teachers and researchers take stock of their current inter- and transdisciplinary courses as well as examine possible approaches to transforming disciplinary and multidisciplinary courses into Id and Td learning environments. To this end, this seminar provides theoretical and practical insights into methods and processes of Id and Td teaching and learning. It is further conceptualized as a place to reflect on one's own teaching and learning experiences with multidisciplinary student teams, in particular in Leuphana's Complementary Studies, and to explore further opportunities for Id and Td teaching. It is also a chance to make visible and share the different ways inter- and transdisciplinarity is already defined and put into practice at Leuphana.

Objectives:

- To explore conceptualizations of Id and Td core methodologies in order to understand better
- what the notion of inter- and transdisciplinarity 'in Action' implies.
- To analyze one's own experiences with multidisciplinary student teams as well as with Id and/or
- Td practices in teaching (particularly in research-based teaching).
- To present select methods and tools for inter- and transdisciplinary teaching and learning in
- action (e.g., methods on boundary-work, interface design, and principles and phases for
- integration and differentiation).

If you are interested, please apply here.
