

Fabrizio Li Vigni: Les systèmes complexes et la digitalisation des sciences. Histoire et sociologie des instituts de la complexité aux États-Unis et en France

How to think the relationship between contemporary scientific cultures and the rising usage of computer in the production of knowledge? MECS Fellow Fabrizio Li Vigni offers to give an answer to such a question by historically and sociologically analyzing the relatively new scientific domain of „complex systems sciences“ (CSS) in his recently published dissertation. CSS became well-known thanks to popular books and articles and has spread in Europe and in other countries of the world in the course of the 1990s and the 2000s.
